

ATLAS[®] Denture Comfort[™]

NARROW BODY IMPLANTS

THE SIMPLE SOLUTION

ATLAS narrow diameter implants are designed for long-term use to effectively retain and stabilize dentures for your patients with moderate to severely resorbed bone. The TUF-LINK[®] silicone relines, secured within the denture by an undercut, provides a cushioned fit for stress-free denture insertion and removal, with no O-rings, housing, or adhesives.

Your patients can walk into your office, undergo a simple insertion with local anesthetic, and walk out with a stable denture. All for a fraction of the cost and time involved with more complex implant modalities.

Who Needs Atlas Denture Comfort?

Denture patients who...

- Are dissatisfied with their dentures
- Have moderate to severely resorbed bone
- Have a limited budget
- Fear surgery
- Want fast results
- Don't like the smell or taste of adhesives
- Are embarrassed speaking
- Have trouble chewing
- Will receive their first dentures

HELPING YOU GET STARTED

Learn the technique at an Atlas HOW[™] Hands-on Workshop!

Take the half-day HOW, a 4-CE workshop where you will learn how to install Atlas implants into an esthetic model, retrofit a denture and relines it with the TUF-LINK silicone material. All steps and instruments are precisely the same as you will use in your office. You will keep your model to use as a valuable patient-education tool in your practice.

"The only course I have ever been to that has had an easy, affordable, and practical answer for the loose lower denture problem. This should be a required course for all dentists who make, adjust (re-adjust and re-adjust...), or relines, full and partial dentures!"

—Review by Alan M. Anderson, DMD
